

DynaGen[™]

RAPIDCORE[™] CONFIGURATION SOFTWARE

FOR TOUGH SERIES CONTROLLERS

HIGHLIGHTS

- Easy to use software interface means you don't need computer programming experience
- Clear, annotated drop down boxes and menu system guide users quickly through programming configuration
- Software updates delivered faster to controller

FEATURES

- Configurations:
 - Adjust safety set-points and calibrations
 - Create your own input and output logic combinations
- Setup:
 - Use a standard USB cable to your computer
 - Simultaneously store configurations into multiple controllers in one click
- Diagnostics:
 - Download the event log from the controller for up to 150 events
 - Create your own text names for engine diagnostic trouble codes
- RemoteIQ[™] cloud-based monitoring and control:
 - Receive critical alarms and event notifications via text, voice or email
 - No infrastructure, licensing or third party integration required
- Front panel speed control
- Setup your own sensor tables
- Customize the CANbus settings

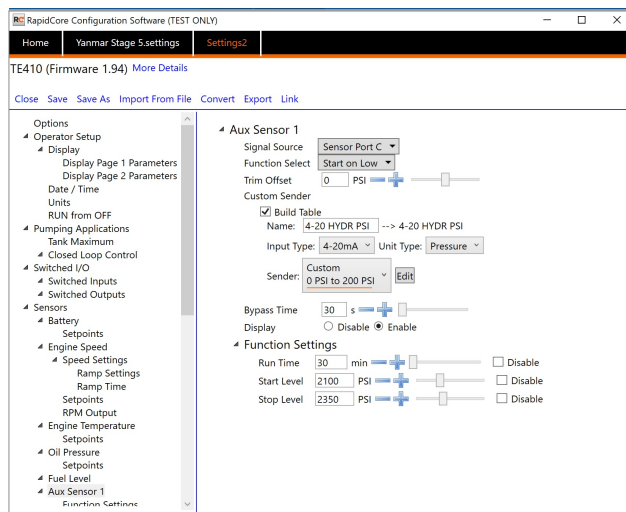

EXAMPLE: ENGINE DRIVEN HYDRAULIC UNIT

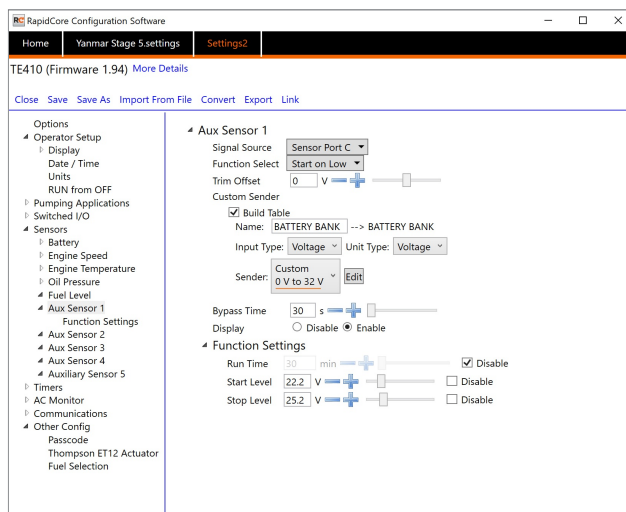

Use the powerful auxiliary sensor function to create a new custom sensor for hydraulic pressure using a 0-20mA input.

- Display hydraulic pressure on the LCD screen
- Use the hydraulic pressure to set high and low safety set-points
- Automatically start the engine when the pressure drops to a pre-defined level. Stop when pressure reaches a second level

EXAMPLE: GENERATOR FOR CHARGING BATTERIES

- Setup sensors to monitor lower engine temperature or low battery voltage
- Create logic to trigger starting and running of the engine for a minimum of two hours
- Keep the batteries at the optimum charge at all times.
